

Department of Pediatrics

MECHANISM OF FUNCTIONING OF MNRMCH IMMUNIZATION CLINIC

MNRMCH caters immunization services to the children through its immunization clinic established under paediatrics department. The vaccination information is shared to parent/ guardian of the child in the paediatrics OPD regularly. Once the parent/ guardian of the child is ready, consent is obtained. The demographic and anthropometric data of the child is recorded followed by clinical history and physical examination of the child by paediatrician. Then the vaccination record/status of the child is checked. If fever or any serious illness is present treatment or admission is done and immunization is postponed. Appropriate vaccines are given to the child while maintaining the cold chain, ensuring correct technique according to the guidelines of regulatory authorities. Child is observed for half an hour for any adverse effects. If any adverse effects are noted then prompt resuscitative measures are taken. If no adverse effect noted then side effects of vaccine are explained to parents and vaccination details are recorded in vaccination card and sent. This is followed by advice on timing for future vaccines or catch up vaccines.

Regular teaching sessions on the importance of immunization clinic and its operations are organized for the students, teaching and non-teaching support staffs. Specifically maintenance of cold chain for the protection of efficacy of the vaccines is highlighted through these sessions.

REPORT ON TEACHING SESSIONS OF IMMUNIZATION CLINIC

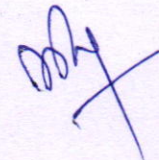

Each academic year MNRMCH department of paediatrics conducts teaching sessions in the child welfare and immunization clinic. For *undergraduates and interns* the theory of immunization is taught as didactic lectures and its practical application is learnt in the immunization clinic. For *post graduates*, they are posted in the immunization clinic as a part of their curriculum where they not only learn the immunization schedule and the routes of administration of individual vaccine as well as the proper storage and monitoring of these vaccines.

REPORT ON RELEVANCE AND OPERATIONAL FEATURES OF MNRMCHIMMUNIZATION CLINIC

The Paediatric dept. Of MNRMCH conducts regular teaching sessions for undergraduate students (II, III & IV year) during theory lectures and as practical sessions during clinical postings. These sessions cover importance of immunization, types of vaccines, methods of immunization, vaccine schedule as part of national immunization programme, vaccine delivery/transport with maintenance of cold chain, storage of vaccine, and routes of vaccine administration, maintenance of vaccination records, post vaccination care and counselling. The Interns and postgraduates are trained similarly during their postings in immunization clinic. The UG and PG students and interns actively participate in the community oriented activities organized by departments of Paediatrics and Community Medicine in spreading awareness on immunization through various awareness programmes organized by MNRMCH. They also take part in national immunization programmes like pulse polio.
