

List of PG Dissertations guide list for A.Y : 2022-23

College Name: MNR MEDIACL COLLEGE, SANGAREDDY

S. No	Student Details		Guide Details		
	Name of the student (as per KNRUHS Approval list)	Name of the Department	Name of the Guide	Designation	Degree
1	Dr.LANKALAPALLI RAGHURAM TEJ	RADIODIAGNOSI S	Dr.MANJIRI JOSHI	PROFESSOR&HO D	M.D Radiology
2	Dr.P.MAHESHWARI	RADIODIAGNOSI S	Dr. JAGANNATH REDDY	PROFESSOR	M.D Radiology
3	Dr.MALLOJU GOWTHAMI KRISHNA	RADIODIAGNOSI S	Dr.MATEEN	PROFESSOR	M.D Radiology
4	Dr. DUVVARI SAMPATH KUMAR	RADIODIAGNOSI S	Dr. VITTAL PRASAD	PROFESSOR	M.D Radiology
5	Dr.THUMMALA ALEKYA REDDY	RADIODIAGNOSI S	Dr.VITTAL PRASAD	PROFESSOR	M.D Radiology
6	Dr.RUPAVATH TEJASREE	RADIODIAGNOSI S	Dr.MANJIRI JOSHI	PROFESSOR & HOD	M.D Radiology
7	Dr.C.MUKESH	RADIODIAGNOSI S	Dr.JAGANNATH REDDY	PROFESSOR	M.D Radiology
8	Dr.G.SUDHEEKSHA	OPHTHALMOLOG Y	Dr.D.BABU RAO	PROFESSOR & HOD	M.S Ophthalmology
9	Dr.AMRADI SAHRUDA	OTORHINOLARY NGOLOGY	Dr.C.P.SUDHEER	PROFESSOR & HOD	M.S ENT
10	Dr.K.SAI RAHUL	RADIODIAGNOSI S	Dr.MATEEN	PROFESSOR	M.S ENT
11	Dr.N.RAKESH	OTORHINOLARY NGOLOGY	Dr.K.PAMPAPATHI GOUD	PROFESSOR	M.S ENT
12	Dr. CHEPURI NITHISH	GENERAL MEDICINE	Dr.LINGARAJ LATURE	PROFESSOR & HOD	M.D Genaral Medicine
13	Dr. AVULA MEGHANA	OPHTHALMOLOG Y	Dr. CH SRINIVAS MURTHY	PROFESSOR	M.S Ophthalmology
14	Dr. YARNAM PAVANI	OPHTHALMOLOG Y	Dr. D. BABU RAO	PROFESSOR & HOD	M.S Ophthalmology
15	Dr. R.RASHMITHA	GENERAL MEDICINE	Dr. SIDDABASAPPA	PROFESSOR	M.D General Medicine
16	Dr.NALLAWAR DIVYA JYOTHI	GENERAL MEDICINE	Dr.SIDDABASAPPA	PROFESSOR	M.D General Medicine
17	Dr.KAKUMANI SURYA PRAKASH	PULMONARY MEDICINE	Dr.MALLU GANGADHAR REDDY	PROFESSOR & HOD	M.D Pulmonology
18	Dr. MAJIDA TABASSUM	GENERAL MEDICINE	Dr.MOHD RIYAZ	PROFESSOR	M.D General Medicine

INTRODUCTION:

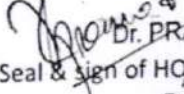

- Anaesthesia to a parturient is exclusive but also requires the very best degree of care because the anaesthesiologist has got to look after two individuals, the mother and foetus. Regional blocks such as spinal, epidural, and a combination of spinal/epidural blocks have gained widespread popularity among the surgical fraternity. Although subarachnoid block is highly efficient with less drug doses, it has some limitations such as hypotension, lesser control over level of blockade, and limited duration of anaesthesia[1,2]. In elective cesarean delivery under spinal anaesthesia hypotension has been reported in as many as 85% of patients [3]. Hypotension could also be detrimental to the mother and therefore the resulting placental hypo perfusion to the foetus.
- Numerous pressor agents have been tried to counteract the hypotensive effect of subarachnoid block, usually by vasoconstriction and also by increasing the cardiac output.[4] In practice, the most commonly used drugs are the sympathomimetic agents which exert their effects through the adrenergic receptors, either acting directly or indirectly by inducing the release of noradrenaline which further acts on these receptors.
- Mephentermine acts by indirect stimulation of beta-adrenergic receptors causing release of norepinephrine from its storage sites. It has positive inotropic effect on the myocardium.[4] Ephedrine is a potent alpha and beta agonist, acting both directly and also indirectly. Its effects on vascular resistance are less pronounced than the other alpha agonists, but it also increases cardiac output thereby maintaining blood pressure.[4,5]
- The present study will be aimed to compare the use of bolus ephedrine and mephentermine for maintenance of arterial pressure during spinal anaesthesia in cesarean section.

1.TITLE

“ANKLE BRACHIAL INDEX AS A PREDICTOR OF
CORONARY ARTERY DISEASE IN TYPE 2 DIABETES MELLITUS AND
HYPERTENSION”

A handwritten signature in blue ink, appearing to read "Shadrake", with a horizontal line underneath the name.

2. INTRODUCTION

1. Atherosclerosis contributes to increasing mortality and morbidity. A simple and a non invasive and bedside test –The ABI can be used to predict the atherosclerotic cardiovascular events even in primary care settings.

2. An ABI less than 0.9 is an indicator of atherosclerotic vascular diseases in different vascular territories.

3. It is sensitive and specific as angiography. Both symptomatic and asymptomatic patients with atherosclerosis and peripheral vascular disease are at increased risk of adverse cardiovascular events.

Data from National health and Nutrition Examination Survey (NHANES) shows that the prevalence of Peripheral vascular disease among people aged over 70 years of age is three times more when compared to patients between 40 to 50 years of age.

5. 70 percent of PAD patients have atherosclerotic sequelae in some other vascular bed. Well controlled and repeated ABI measurements by practitioners are enough as clinical gatekeepers for decision making.

6. Considering all the above factors this study is being undertaken.

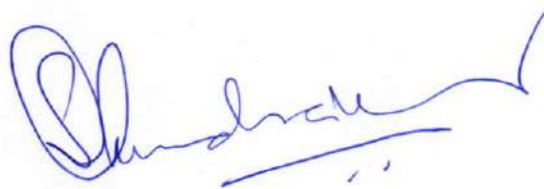

MNR MEDICAL COLLEGE & HOSPITAL
FASALWADI, SANGAREDDY-502294

3.AIM

“ANKLE BRACHIAL INDEX AS A PREDICTOR OF
CORONARY ARTERY DISEASE IN TYPE 2 DIABETES MELLITUS
AND HYPERTENSION

4.OBJECTIVES

1. To study the relationship between various risk factors like Hypertension, type 2 Diabetes mellitus with ankle brachial index.
2. To determine the relationship between peripheral artery disease and coronary artery disease in high risk population using Ankle Brachial Index values

PRINCIPAL
MNR MEDICAL COLLEGE & HOSPITAL
FASALWADI, SANGAREDDY-502294

5. MATERIAL AND METHOD

STUDY DESIGN :Prospective Observational Study.

PLACE OF STUDY : Department of General Medicine,
MNR Medical College and Hospital.

PERIOD OF STUDY : 18 Months (March 2023 –September 2023).

STUDY POPULATION : outpatient Clinic of MNR Medical College and Hospital.

SAMPLE SIZE : 100

PRINCIPAL
MNR MEDICAL COLLEGE & HOSPITAL
FASALWADI, SANGAREDDY-502294

6. INCLUSION CRITERIA

1. Age >45 years
2. TYPE 2 DIABETES MELLITUS
3. HYPERTENSION
4. SMOKING
5. DYSLIPIDEMIA
6. CORONARY ARTERY ANGIOGRAM

7. EXCLUSION CRITERIA

1. Patients with lower limb gangrene
2. Patients with ABI >1.4
3. Patients with deformity of upper or lower limbs
4. Unclear results of ABI or coronary angiography
5. Patients who did not give consent for the procedure

PRINCIPAL
MNR MEDICAL COLLEGE & HOSPITAL
FASALWADI, SANGAREDDY-502294

8.METHODOLOGY

1. A complete history was obtained from our patients who were admitted as inpatients in the medical and cardiology wards including the past history and the history of risk factors like Type 2 diabetes mellitus, systemic hypertension, smoking and hyperlipidemia.
2. A complete physical examination including the vitals was done. Detailed cardiovascular examination was done and the findings were confirmed using an electrocardiogram. All the patients who were admitted with CAD (ST elevation MI and non ST elevation MI and unstable angina were subjected to coronary angiogram.
3. The Ankle brachial index was measured in the study population and the results were compared.
4. Treatment was given for the CAD and the risk factors as well.

PRINCIPAL
MNR MEDICAL COLLEGE & HOSPITAL
FASALWADI, SANGAREDDY-502294

9. REVIEW OF LITERATURE

In 2021 Awadesh kumar Sharma carried a study on A comparative assessment of the severity of coronary artery disease in patients with low Ankle-Brachial index and normal Ankle-Brachial index an angiography-based cross sectional study, a total of 500 patients taken and divided in to two groups i.e. Group A (patients with low ABI <0.9) and Group B (patients with normal ABI >0.9),among them 4.6% as low ABI and all with low ABI had coronary artery disease. In assessing CAD severity, it was reported that in group A, triple vessel disease(TVD) was presented in 65.2%(P=0.0001),double vessel disease in 21.7% (P=0.72),single vessel disease in 8.6%(P=0.06) and non critical CAD in 4.3%(P=0.9).Therefore coronary artery disease is widely prevalent in almost all patients with low Ankle-brachial index and more than half of these patients have triple vessel disease (TVD) on angiographic assessment.

In 2020 **Sanghyun Ahn et al** carried a study on Predictive value of Abnormal and borderline Ankle-Brachial Index for Coronary Re-Intervention and Mortality in patients with Coronary Artery Disease an observational cohort study which included total of 33 patients with abnormal ABI and 252 had a normal ABI, study concluded that the incidence of mortality (18.2% vs 6.7%,P=0.0233) and clinically indicated coronary re-intervention (48.5% vs 31.3%,P=0.0036) was significantly higher in the abnormal ABI group than normal ABI group.

PRINCIPAL
MNR MEDICAL COLLEGE & HOSPITAL
FASALWADI, SANGAREDDY-502294

In 2013 **Eduardo D.E. Papa** carried a study on Ankle-brachial index as a predictor of coronary disease events in elderly patients submitted to coronary angiography an prospective observational study which included 100 patients above 65 years concluded that,

In elderly patients with documented coronary disease, a low ankle-brachial index (<0.9) was associated with the severity and extent of coronary arterial disease . Therefore a low index was correlated with an increase in the occurrence of major cardiovascular events.

In 2012 **Sarangi et al** carried a study on The correlation between peripheral arterial disease and coronary artery disease using ankle brachial index,in the patients older than 45 years who were selected randomly with one or more risk factors for peripheral arterial disease based on ABI value of <0.9 ,peripheral arterial disease was diagnosed in 32 out of the 182 patients studied that is 18% of the study population. Coronary artery disease was present in 15 cases of peripheral arterial disease patients which is statistically significant number.

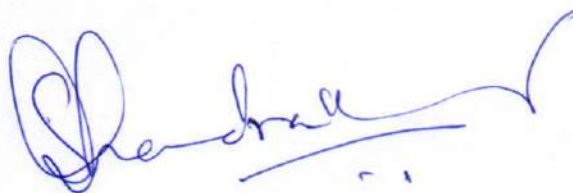

In 2011 **Sadeghi et al** conducted a study on The relation between Ankle-Brachial index and coronary artery disease severity and risk factors an angiographic study which is a cross sectional descriptive analytical study, study population were obtained using a standard questionnaire that included family history, past history, diabetes mellitus,hypertension,hyperlipidemia and smoking.The study subjects with ABI <0.9 were subjected to coronary angiography and the results concluded that prevalence of risk factors for atherosclerosis were significantly higher among ABI positive group and the ABI positive patients had a more severe stenosis.

11.ACKNOWLEDGEMENT

I, Dr. NALLAWAR DIVYA JYOTHI MD – General Medicine of 2022 admission batch here by acknowledge that I have gone through the KNRUHS MD/MS Dissertation Topics of previous 3 years pertaining to my specialty and the dissertation work titled "ANKLE BRACHIAL INDEX AS A PREDICTOR OF CORONARY ARTERY DISEASE IN TYPE 2 DIABETES MELLITUS AND HYPERTENSION" is not a repetitive work.

- I understand that undertaking a repetitive work of dissertation which is submitted within last 3 years will lead to rejection of my dissertation topic and I need to submit the new synopsis.

TITLE: "A COMPARITIVE STUDY OF MICROALBUMINURIA TO DIFFERENTIATE BETWEEN PREHYPERTENSIVE AND NORMOTENSIVE INDIVIDUALS

Presented by: Dr. Majida Tabassum 1st year Post Graduate MD General Medicine MNR Medical College and Hospital Sangareddy.

TITLE

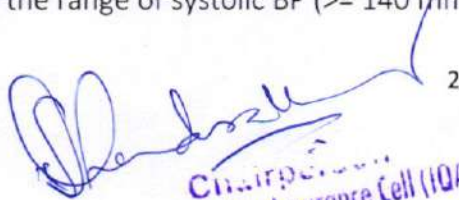

A COMPARITIVE STUDY OF MICROALBUMINURIA TO DIFFERENTIATE BETWEEN PREHYPERTENSIVE AND NORMOTENSIVE INDIVIDUALS

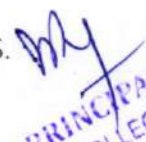

INTRODUCTION

Prehypertension is a blood pressure reading where the patient's BP is more than normal but not up to the level which is considered as hypertension. Prehypertension is a warning sign that the patient may develop hypertension in his near future. According to American Heart Association, around 59 million people are having prehypertension in United States.

The NHANES(The National Health And Nutrition Examination Survey) which is a part of National Center for Health Statistics (NCHS), located within CDC (Center for Disease Control and Prevention) was conducted in the year 1999 and 2000. The data obtained from this survey showed that around 31 percent of people in United States had [881]. The prevalence was 39 percent among men and 23 percent among women[2].

NHANES(1999-2000) also found that almost 29% of the adult non institutionalized U.S. population, which is an estimated 58.5 million individuals, had hypertension, with systolic BP of ≥ 140 mm Hg and diastolic BP of ≥ 90 mm Hg. The prevalence has increased by 3.7% compared with the previous NHANES data from 1988 to 1991. NHANES [9] (2011- 2012) had found that the prevalence of hypertension was 29.1 percent which is almost similar to that in 1999-2000. Based on classification proposed by JNC 7, prehypertension is termed as a person's BP falling within the range of systolic blood pressure (120- 139 mmHg) and diastolic blood pressure (80-89). The person is said to be hypertensive if his BP falls in the range of systolic BP (≥ 140 mmHg) and diastolic BP (≥ 90 mmHg)[4
